

# PHARMACEUTICAL AND VETERINARY COMPOUNDS AND METABOLITES

High quality reference materials for  
analytical testing of pharmaceutical and  
veterinary compounds and metabolites.

# PHARMACEUTICAL AND VETERINARY COMPOUNDS AND METABOLITES

## What you need to know

Pharmaceutical and veterinary medicines are essential for human and animal welfare, but their use can leave residues in both the food chain and the environment. In a 2019 survey of EU member states, the European Food Safety Authority (EFSA) found that the number one food safety concern was the misuse of antibiotics, hormones and steroids in farm animals. This is, in part, related to the issue of growing antibiotic resistance in humans as a result of their potential overuse in animals. This level of concern and increasing awareness of the risks associated with veterinary residues entering the food chain has led to many regulatory bodies increasing surveillance activities for pharmaceutical and veterinary residues in food and water supplies.

For example, the EU Directive 96/23/EC sets out the requirements for residue monitoring plans and establishes the range of substances to be tested in live animals and animal products. In addition, each EU member state must have a National Residue Control Plan (NRCP). NRCPs are targeted surveillance testing designed to police the correct use of veterinary medicinal products. Non-EU countries exporting food to the EU must implement monitoring programmes which comply with equivalent food safety levels.

In China, the Ministry of Agriculture Announcement No. 235 (中华人民共和国农业部公告第235号) sets out the requirements for residue monitoring plans and establishes the range of substances to be tested in live animals and animal products. The government also sets National Food Safety Inspections (国家食品安全监督抽检) every year to police the correct use of veterinary medicinal products to ensure food safety. In addition, a new GB method took effect on 1 April, 2020, entitled 'National food safety standard - Maximum Residue Limits For Veterinary Drugs in Food' ('食品安全国家标准 动物性食品中兽药最大残留限量 (报批稿)').

To facilitate the fair trade of food, and to ensure a consistent and evidence-based approach to consumer protection across the globe, the Codex Alimentarius Commission ("Codex") was established in 1963. Codex is a joint agency of the FAO (Food and Agriculture Office of the United Nations) and the WHO (World Health Organisation). It is responsible for producing and maintaining the Codex Alimentarius: a compendium of standards, guidelines and codes of practice relating to food safety. The legal framework for the authorisation, distribution and control of Veterinary Medicinal Products (VMPs) varies from country to country, but certain common principles apply which are described in the Codex guidelines.

On the following pages you will find our extensive selection of pharmaceutical and veterinary reference materials, including where available the parent compounds, associated metabolites and stable isotope labelled (SIL) compounds.

Visit [lgcstandards.com/drehrenstorfer](https://www.lgcstandards.com/drehrenstorfer) to explore the full and extensive range of over **8,000** Dr. Ehrenstorfer reference materials available for food and environmental analysis.

Our Dr. Ehrenstorfer range of pharmaceutical and veterinary reference materials has been designed to support you in your analytical testing and address different regulatory methods applied around the world. You will find our comprehensive offering includes both metabolites and stable isotope labelled (SIL) compounds for many of our parent compounds.

Testing the active drug is often not sufficient, since they are metabolized into other biologically active substances. As more research is conducted in this area, metabolites are increasingly being written into regulations with specific maximum residue limits, necessitating metabolite testing. SIL compounds can be added to samples to negate the 'matrix effects' often observed with mass spectrometric techniques such as LC-MSMS, further ensuring the reliability of your analysis.

We are continually adding products to this portfolio to maintain pace with emerging and evolving analytical requirements. Our latest and full range can always be explored on our website [lgcstandards.com](http://lgcstandards.com).

With all measurements on our certificate of analysis carried out in accordance with ISO 17025 and a majority of products produced under the scope of our ISO 17034 accreditation, we guarantee the highest quality reference materials for your analytical testing.

## WHAT IS YOUR SMART SOLUTION™?

Challenge us to meet your analyte needs, no matter the complexity.

# PHARMACEUTICAL AND VETERINARY COMPOUNDS AND METABOLITES

Dr. Ehrenstorfer has an extensive range of neat, single solution and multicomponent solution products for the analytical testing of pharmaceutical and veterinary compounds and metabolites. In addition, we offer not just the parent compounds, but also stable isotope labelled (SIL) compounds, associated metabolites and SIL variants of metabolites for some products. On the following pages you will find an index of selected parent compounds and available associated SILs and metabolites, allowing you to thoroughly test for pharmaceutical and veterinary compounds.

You can also visit [lgcstandards.com/drehrenstorfer](http://lgcstandards.com/drehrenstorfer) to browse the full range of products.
